

INFORMATICS PRACTICES

2023-2024

MOVIE RECOMMENDATION SYSTEM

Acknowledgement

*I would like to express my special thanks of gratitude to my teacher Mr. Narbhadeshwar Deovanshi who gave us this golden opportunity to do this project on the topic "Movie Recommendation system", We further thank to all the staff members of Inodrama Public School, Jagdishur. Our heartfelt thanks to
CBSE*

Finally, I would also like paying our heartfelt thank to my friends who helped me a lot in finishing this project.

CERTIFICATE

This is to certify that informatics practices project titled “MOVIE RECOMMENDATION SYSTEM” has been successfully completed by Suryansh Sinha of class XII-A under the guidance of Mr. Narbhadeshwar Deovansh in partial fulfillment of practices project examination of central board of secondary examination (CBSE) in the year 2023-24.

Project Brief:

In this project, we will create a simple movie recommendation system in Python. The system will ask the user for their movie preferences, such as age group, minimum IMDb rating, minimum Rotten Tomatoes rating, and runtime range. It will then recommend movies from a dataset based on these preferences. It is user friendly. This software package has been developed using the powerful coding tools of PYTHON. The software is very user friendly.

What Is Python??

Python is a computer programming language often used to build websites and software, automate tasks, and conduct data analysis. Python is a general-purpose language, meaning it can be used to create a variety of different programs and isn't specialized for any specific problems. This versatility, along with its beginner-friendliness, has made it one of the most-used programming languages today.

It's used in everything from machine learning to building websites and software testing. It can be used by developers and non-developers also.

Python is commonly used for developing websites and software, task automation, data analysis, and data visualization

HARDWARE AND SOFTWARE REQUIREMENT

SOFTWARE:

Operating system: macOS\WINDOWS\LINUX

Application: Spyder/Anaconda/Python:IDLE

HARDWARE USED:

Processor: Intel(R) Core(TM) i5-2400 CPU @ 3.10GHz (Edition used: Windows 10 Pro)

R.A.M: 8.00 GB
